

Patient:	Unknown	Patient ID:	NS-20260702092912
Age:	Not specified	Gender:	Not specified
Date:	July 02, 2026 09:29	Report Type:	Epilepsy EEG

RISK LEVEL ASSESSMENT

HIGH

Risk Level

Seizure activity detected in EEG signal. Neurological evaluation strongly recommended.

DIAGNOSTIC RESULT

Diagnosis: SEIZURE

CONFIDENCE SCORE

56.0%

CLINICAL SUMMARY

Patient Unknown underwent AI-assisted EEG signal analysis using a dense neural network model with edge-detection preprocessing. The analysis classified the EEG pattern as "SEIZURE" with a confidence score of 56.0%. Risk level has been assessed as HIGH. Clinical correlation with patient history and additional EEG monitoring is advised.

PRECAUTIONARY MEASURES

- Avoid known seizure triggers.
- Keep a seizure diary.
- Ensure a safe environment.
- Wear a medical alert bracelet.

- Anti-epileptic drug therapy should be evaluated by a neurologist.

FOLLOW-UP RECOMMENDATIONS

- 1 Urgent neurological consultation required
- 2 Comprehensive EEG monitoring recommended
- 3 Anti-epileptic medication evaluation
- 4 Driving and activity restrictions review
- 5 Seizure action plan development
