| Patient: | yz                  | Patient ID:  | NS-20260701172630 |
| Age:     | 21 years            | Gender:      | male              |
| Date:    | July 01, 2026 17:26 | Report Type: | Alzheimer's MRI   |

## RISK LEVEL ASSESSMENT

**MODERATE**

**Risk Level**

Mild cognitive impairment identified. Clinical follow-up and intervention strategies recommended.

## DIAGNOSTIC RESULT

### Diagnosis: Mild Impairment

#### CONFIDENCE SCORE

100.0%

## CLINICAL SUMMARY

Patient yz, age 21 (male) underwent AI-assisted MRI brain scan analysis using a Convolutional Neural Network (CNN) model. The analysis classified the scan as "Mild Impairment" with a confidence score of 100.0%. Risk level has been assessed as MODERATE. This result should be correlated with clinical findings and further diagnostic workup.

## PRECAUTIONARY MEASURES

- Establish a structured daily routine.
- Use memory aids.
- Ensure home safety modifications.
- Arrange caregiver check-ins.

- Cholinesterase inhibitors or Memantine may be considered by a specialist.

## FOLLOW-UP RECOMMENDATIONS

- 1 Urgent neurologist consultation recommended
- 2 Comprehensive neuropsychological evaluation
- 3 Discuss medication options with specialist
- 4 Engage occupational therapy for daily task support
- 5 Family/caregiver education and planning
